EDUCATION

University of Maryland, Baltimore County Baltimore, MD *M.S. in Information Systems, Specialization in Data Science and AI*
Coursework: Advanced Database Projects, Data Analysis in Healthcare, Advanced AI, Data Mining, Social Media Analytics — May 2024

TECHNICAL SKILLS

- **Languages & Tools**: Python, Java, C++, JavaScript, SQL, Git, GitHub, Postman, Jupyter, VS Code
- **Frameworks**: LangChain, Langsmith, Langgraph, Hugging Face, Guardrails AI, Google ADK, OpenAI SDK
- **Database**: PostgreSQL, MySQL, Oracle, MongoDB, Pinecone, Weaviate, FAISS
- **Cloud, Data Engineering & Infrastructure:** AWS, Azure, GCP, Databricks, Databricks SQL, Apache Spark, ETL, Data Integration, Data Modeling, Data Warehousing, n8n, Camunda

PROFESSIONAL EXPERIENCE

AI/ML Engineer — Ccube Inc **Aug 2024 – Present -** *CA, USA*

- Architected and shipped production GenAI and RAG applications for financial and regulated-industry clients by orchestrating OpenAI models, GPT-OSS, and Llama-3 via OpenRouter and Google ADK/OpenAI SDK, with Weaviate powering retrieval over enterprise knowledge bases — improving automated query resolution across customer support and live-chat workflows.
- Standardized multi-model tool-calling across agents by implementing Model Context Protocol (MCP) integrations connecting LLM agents to internal APIs and data sources, then paired those agents with n8n and Camunda (BPMN) automation to replace manual handoffs in document intake and case routing, cutting manual processing time by roughly 40%.
- Partnered with technical and business stakeholders to scope AI use cases and translate operational requirements into deployable, microservice-based AI applications, reducing average workflow turn around time by roughly 25% and improving customer experience.

Data Analyst — CRISP Shared Services **Jun 2023 – May 2024 -** *MD, USA*

- Leveraged Databricks SQL and SQL-based transformation, validation, and quality analysis to retrieve and analyze large healthcare datasets (500+ PHI records) across hospital data sources in Washington, DC, Maryland, and Virginia.
- Performed large-scale data integration and synchronization using IBM InfoSphere, identifying false positives, false negatives, overlays, and duplicates while maintaining 98% data accuracy across 1,500+ patient records.
- Developed data visualizations and dashboards using Agile methodology and collaborated with stakeholders to translate healthcare data requirements into actionable solutions, increasing data understanding by 20% and decision-making efficiency by 15%.

System Data Engineer — Infosys Pvt. Ltd. **Jun 2021 – Aug 2022 -** *India*

- Analyzed Fitbit user and device data for 200+ users on a weekly basis to identify behavioral trends and generate insights that contributed to a 22% improvement in user retention.
- Built a real-time monitoring utility for tracking user feedback and system issues, reducing duplicate bugs by 35% and improving visibility into application quality.
- Contributed to embedded data systems for real-time test-data capture from smartwatches and smartphones, working across software, data, and testing teams to reduce data acquisition latency by 20% and improve application reliability.

PROJECTS

Guardiance — AI-Powered Compliance Intelligence Platform | *OpenAI models, GPT-OSS, Guardrails AI, NLP, NER, Pinecone*

- Engineered a multi-layer compliance detection pipeline combining semantic policy matching, entity extraction, contextual risk scoring, and deterministic validation across 38+ HIPAA, financial, and security controls, reducing manual review effort by approximately 70%.

IntelliConnect — Enterprise Multi-Agent AI Orchestration Platform | *LLMs, MCP, OpenRouter, RAG, COT, Pinecone, Weaviate*

- Designed a scalable, model-agnostic multi-agent orchestration layer with contextual memory, role-based access control, dynamic agent/model routing, and retrieval-backed execution across Customer Support, Healthcare, Banking, and Finance, reducing workflow turnaround time by approximately 60%.

Google ADK Healthcare Appointment Booking Multi-Agent System | *Google ADK, MCP, OpenRouter, NLP, Google Sheets, Gmail, n8n*

- Developed a five-agent healthcare appointment system on Google ADK for patient intake, symptom mapping, scheduling, and communication, integrating Google Sheets/Gmail via MCP, automating downstream steps with n8n, and routing model calls through OpenRouter to balance cost and latency — cutting manual scheduling effort by approximately 65%.
